RESEARCH INTERESTS

- **Tropical cyclone risk assessment in future climates** with a focus on governance- and policy-relevant scenarios. Applications to extreme precipitation events and climate intervention technologies.
- **Detectability and statistical significance of climate signals**, including the effects of sampling limitations of spaceborne instruments and gaps in the observational record. Application: recovery of the ozone hole, changes in the strength of the overturning stratospheric circulation.
- **Non-parametric algorithm development**, use of image processing tools for robust and optimized methods. Application: jet stream tracking and labeling algorithm for use in climate studies.
- **Dynamical and chemical processes in the global tropopause layer**: convective influence in the tropics, global cross-tropopause transport of trace gasses.
